EDUCATION

Egypt-Japan University of Science and Technology (E-JUST)

Bachelor of Science in Computer Science

New Borg El-Arab, Egypt

September 2023 – June 2027

- Merit-Based Scholarship - Egypt-Japan University (Covering 25% of tuition fees)
- Relevant Coursework: Data Structures & Algorithms, Database Systems, Software Engineering, Web Development, Embedded Systems, Object-Oriented Programming, Operating System, Computer Organization, Software Process, Software Design, Human Computer Interaction, Computer Networks, Intelligent Systems, Robotics, Soft Computing
- Languages: Arabic (Native), English (Fluent), Japanese (Intermediate)

EXPERIENCE

Loop Dimension - www.loopdimension.com

Full-Stack Developer

Seoul, South Korea

June 2024 – Present

- Developed responsive web applications using React.js and Node.js for client projects by implementing modern UI/UX design principles and RESTful API architecture
- Built customized software solutions using Python, Django, and PostgreSQL by collaborating with international clients across various industries including e-commerce and healthcare
- Integrated ML/AI features into web platforms using TensorFlow and Python by developing recommendation systems and data analysis tools for client applications

TRAINING & CERTIFICATIONS

UI/UX Design | *120 Training Hours*

Information Technology Institute (ITI)

Web Designer Program | *120 Training Hours* | *Final Score: 96%*

National Telecommunication Institute (NTI)

HCIA-5G Technical Training | *40 Training Hours*

Electronics Research Institute (ERI)

Design Thinking | *Training Course*

Microsoft, Ministry of Communications & IT, CARE Egypt

FEATURED PROJECTS

Church Attendance System | *Full-Stack Web Application* | [GitHub](#)

- Built a full-stack church attendance management system using vanilla JavaScript (SPA architecture), Python serverless functions, and PostgreSQL (Supabase), deployed on Vercel with role-based access for admins and teachers managing students across 14 grade levels
- Designed a RESTful API in Python handling authentication with SHA-256 hashed passwords and Bearer token sessions, alongside a normalized PostgreSQL schema covering users, students, teachers, and attendance records with automated attendance rate calculation

Rento Property Rental Web Application | *Ui/UX — Frontend Development* | [GitHub](#)

- Developed Rento, a multi-page property rental web application built with HTML, CSS, JavaScript, and Bootstrap 5 as a Human-Computer Interaction course project.
- The app features an interactive map, booking system, user dashboard, favorites management, authentication, and a dark mode toggle — all designed with a focus on usability and responsive UI/UX principles.

FileGuard Recovery Tool | *C++ System Programming* | [GitHub](#)

- Developed cross-platform file recovery application using C++ for Windows and Linux systems by implementing raw disk scanning algorithms and file signature detection methods
- Built file system analysis engine with support for multiple storage devices by creating disk data parsing routines and recovery algorithms for various file types

SecureBank Management System | *Python GUI Development* | [GitHub](#)

- Created desktop banking application using Python and Tkinter GUI framework by implementing account creation, transaction processing, and balance inquiry features
- Developed secure authentication system with PIN management by implementing multi-layer validation, PIN recovery functionality, and session security protocols

Line Follower Robot | *Robotics — Arduino — Hardware* | [GitHub](#)

- Built an autonomous line-following robot using Arduino and a TB6612FNG dual H-bridge motor driver with 3 digital IR sensors, implementing a multi-state sensor brain that handles 7 distinct track conditions including intersections, sharp turns, and centered tracking
- Developed a 5-step non-blocking recovery state machine using `millis()` timing that systematically searches for a lost line by backing up, spinning toward the last known direction, sweeping the opposite side, creeping forward, and performing a full 180° sweep as a last resort

SKILLS

Languages	: Python, C/C++, Java, JavaScript, Assembly
Frontend	: HTML5, CSS3, React.js, Bootstrap, Tailwind
Backend	: Node.js, Django, Flask, Laravel, REST APIs, JSON
Databases	: MySQL, SQLite, PostgreSQL, MongoDB
Embedded	: Arduino, Microchip Studio, Proteus
Tools	: Git, GitHub, Linux, Windows, Kafka, Agile/Scrum
Design	: Figma, Adobe Photoshop, Adobe Illustrator
IDEs	: VS Code, PyCharm, Eclipse, Colab
