EDUCATION

Egypt-Japan University of Science and Technology (E-JUST)

Bachelor of Science in Computer Science

New Borg El-Arab, Egypt

September 2023 - June 2027

- Merit-Based Scholarship - Egypt-Japan University (Covering 25% of tuition fees)
- Relevant Coursework: Data Structures & Algorithms, Database Systems, Software Engineering, Networks and Web Programming, Computer Organization, Embedded Systems, Advanced Programming, Operating System
- Languages: Arabic (Native), English (Fluent), Japanese (Intermediate)

EXPERIENCE

Loop Dimension - www.loopdimension.com

Full-Stack Developer

Seoul, South Korea

June 2024 - Present

- Developed responsive web applications using React.js and Node.js for client projects by implementing modern UI/UX design principles and RESTful API architecture
- Built customized software solutions using Python, Django, and PostgreSQL by collaborating with international clients across various industries including e-commerce and healthcare
- Integrated ML/AI features into web platforms using TensorFlow and Python by developing recommendation systems and data analysis tools for client applications

PROJECTS

DentalCare Online Booking System | *Frontend Development* | GitHub

- Built responsive dental clinic booking interface using HTML5, CSS3, and JavaScript by implementing form validation and dynamic calendar display for appointment scheduling
- Created user authentication system with secure login and registration forms by utilizing localStorage for session management and input validation for user data security

StyleHaven E-Commerce Platform | *Frontend Development* | GitHub

- Developed interactive clothing store interface using HTML5, CSS3, and JavaScript by implementing dynamic product catalog with category filtering and shopping cart functionality
- Implemented user account management system with secure authentication by creating registration/login forms with input validation and session management using localStorage

Media Store Inventory System | *Python Application Development* | GitHub

- Built comprehensive inventory management system using Python with GUI interface by implementing order processing, shipping address management, and inventory tracking features
- Developed automated order workflow with customer data management by creating file-based data storage system and implementing order status tracking functionality

FileGuard Recovery Tool | *C++ System Programming* | GitHub

- Developed cross-platform file recovery application using C++ for Windows and Linux systems by implementing raw disk scanning algorithms and file signature detection methods
- Built file system analysis engine with support for multiple storage devices by creating disk data parsing routines and recovery algorithms for various file types

SecureBank Management System | *Python GUI Development* | GitHub

- Created desktop banking application using Python and Tkinter GUI framework by implementing account creation, transaction processing, and balance inquiry features
- Developed secure authentication system with PIN management by implementing multi-layer validation, PIN recovery functionality, and session security protocols

ProximityGuard Security System | *Embedded Systems Development* | GitHub

- Built Arduino-based proximity detection system using HC-SR04 ultrasonic sensor and Arduino UNO-R3 by implementing distance measurement algorithms and alert mechanisms
- Developed automated alarm system with LED and buzzer alerts by programming sensor data processing, distance threshold detection, and real-time warning activation

SKILLS

Python, C/C++, Java, JavaScript, HTML5, CSS3, React.js, Node.js, Django, Flask, MySQL, PostgreSQL, MongoDB, Git, GitHub, Arduino, Microchip Studio, Proteus, Assembly, Linux, Windows, Agile/Scrum, REST APIs, JSON, Bootstrap, Figma, VS Code, PyCharm, Eclipse
